How is Artificial Intelligence and Automation Changing the World?

Thursday, 21st April 2022 | Technical Topic Webinar

Presented by Dr. Hadi Harb, EIT Lecturer

About EIT

We are dedicated to ensuring that you receive a world-class education and gain skills that you can immediately implement in the workforce.

Engineering Specialists

EIT is one of the only institutes in the world specializing in Engineering. We deliver professional certificates, diplomas, advanced diplomas, undergraduate and graduate certificates, bachelor's and master's degrees, and a Doctor of Engineering.

Industry Oriented Programs

Our programs are designed by industry experts, ensuring you graduate with cutting-edge skills that are valued by employers. Our program content remains current with rapidly changing technology and industry developments.

World-Class Australia Accredited Education

Our vocational programs and higher education degrees are registered and accredited by the Australian Government. We have programs that are also recognized under three international engineering accords.

Industry Experienced Lecturers

Our lecturers are highly experienced engineers and subject specialists with applied knowledge. The technologies employed by EIT, both online and on-campus, enable us to source our lecturers from a large, global pool of expertise.

Unique Delivery Model

We deliver our programs via a unique methodology that makes use of live and interactive webinars, an international pool of expert lecturers, dedicated learning support officers, and state-of-the-art technologies such as hands-on workshops, remote laboratories, and simulation software.

CRICOS Provider Number: 03567C | Higher Education Provider Number: 14008 | RTO Provider Number: 51971

Agenda

1	Welcome and Introduction
2	What is Artificial Intelligence?
3	Terminology
4	Building an Artificial Intelligence System
5	Case Studies
6	Conclusion and Q&A

Introduction - Presenter

Dr. Hadi Harb

- Dr Hadi Harb has more than 15 years of experience in the development and management of Artificial Intelligence and Audio Signal Processing projects.
- Hadi holds a MEng (2000) in electrical-electronic engineering. He earned his MSc in 2001 and PhD in 2004 both in computer science from the Institut National des Sciences Appliquées INSA Lyon, and the Ecole Centrale de Lyon respectively.
- He co-founded and managed Ghanni, a company specialized in multimedia content recommendation and identification. His focus in on the application of AI techniques to natural language understanding and human-like process control.
- Hadi teaches units within EIT's Professional Certificates of Competency, Advanced Diplomas and Master of Engineering degrees.

What is Artificial Intelligence?

What is Intelligence?

Is it having a consciousness?

What about animals?

Is it solving complex problems? What is a complex problem?

It is making calculations? Is it recognizing objects?

Is it making abstractions?

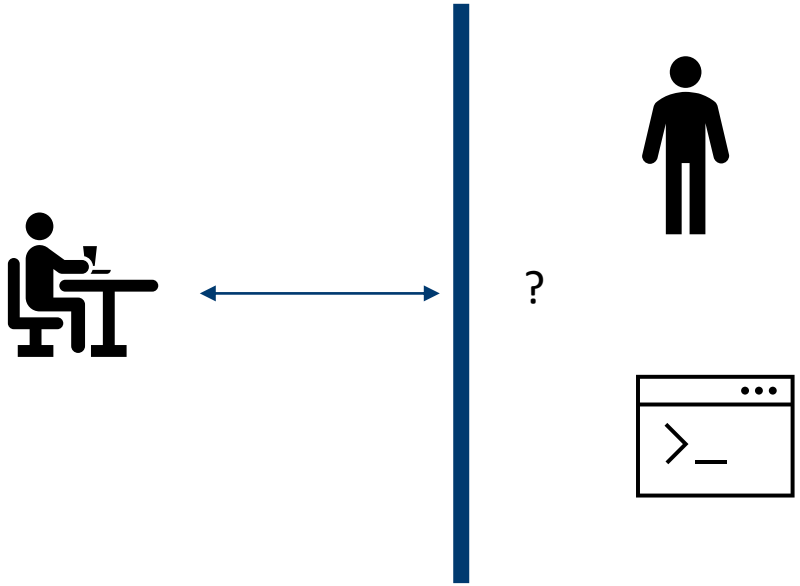
How do we gauge intelligence?

Act Like a Human

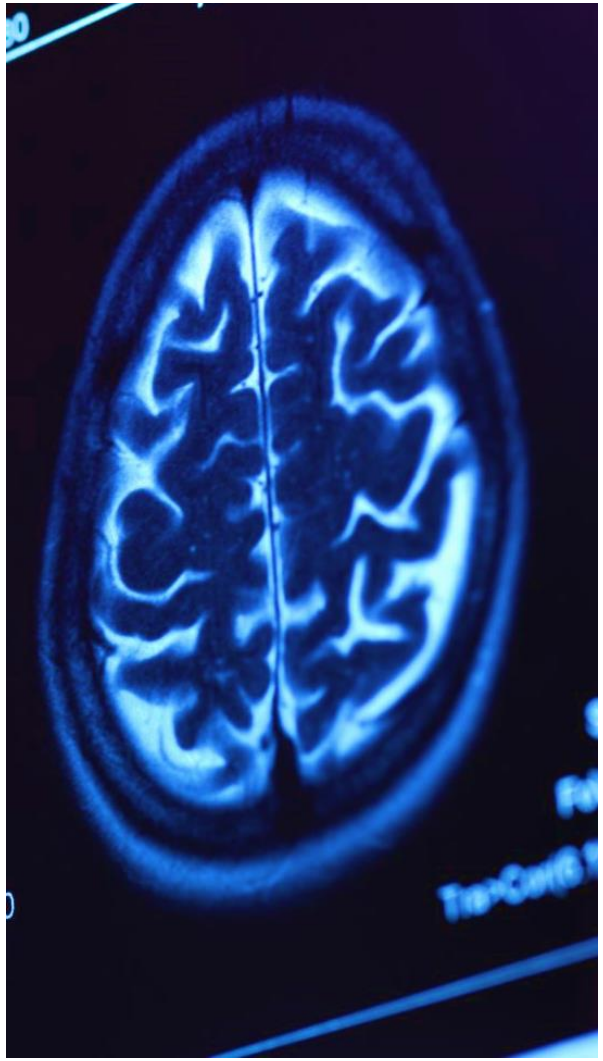
Turing Test

A method of inquiry in artificial intelligence (AI) for determining whether or not a computer is capable of thinking like a human being.

- A human judge interrogates another entity without knowing if it is a machine or a human. If the judge thinks the machine is a human, the machine passes the test.
- Chatbots fall into this category.



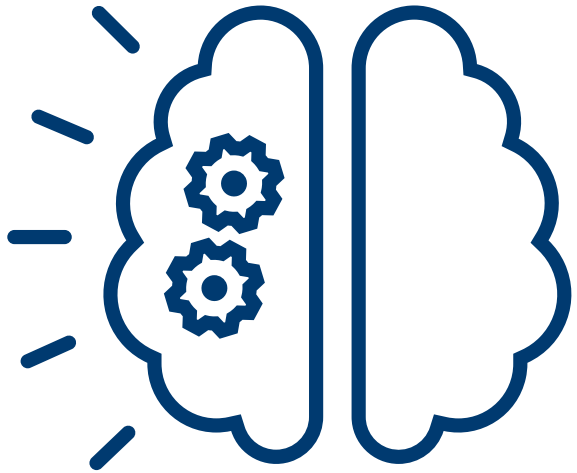
Think like a Human



- Thinking is the act of information processing
  - Cognitive Neuroscience
  - Connexionist approaches were inspired by this category

Think Rationally

- Logic and mathematics
  - *Aristotle*
- But not all intelligent behaviour is mediated by logical deliberation

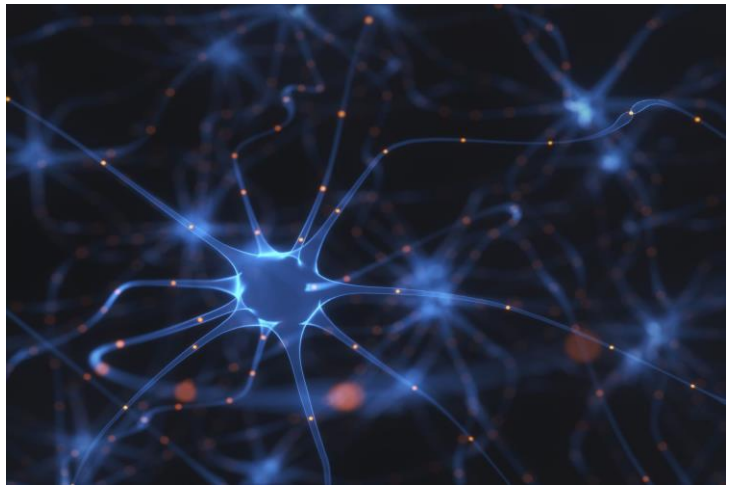


Weak AI vs Strong AI

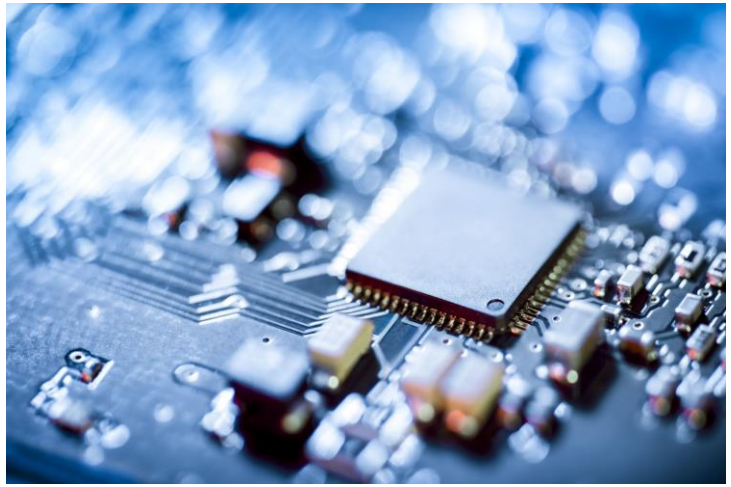
Terminator: Genesis (Paramount Pictures)

- **Weak AI**
  - AI is to solve real world problems even if solution is not “human-like”
- **Strong AI**
  - AI is to think and act like a human
  - Fantasies about AI is in fact about strong AI

Human vs Machine



- **Human**
  - Computing : 10^{11} neurons (100 billion)
  - Storage : 10^{11} neurons / 10^{14} synapses
  - Computing cycle time: 10^{-3} seconds



- **Machine**
  - Computing : 10^{9} transistors
  - Storage : 10^{11} bits RAM
  - Computing cycle time: 10^{-9} seconds

State of the Art

- Autonomous vehicles
- Facial recognition
- Speech recognition
- Virtual assistants
- Forecasting
- Medical diagnosis

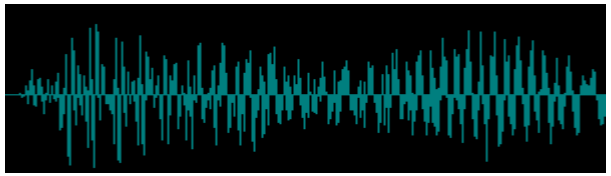
Terminology

Machine Learning

- **The ability of the machine to learn from data**
  - To go beyond the initial program
- **Supervised learning**
  - Classification, regression
- **Unsupervised learning**
  - Clustering, pattern finding
- **Reinforced learning**
  - Agent interacts with the environment to maximize

Supervised Learning - Classification

- Classification problems



Who is the founder of Apple

↓

[ORGANIZATION]

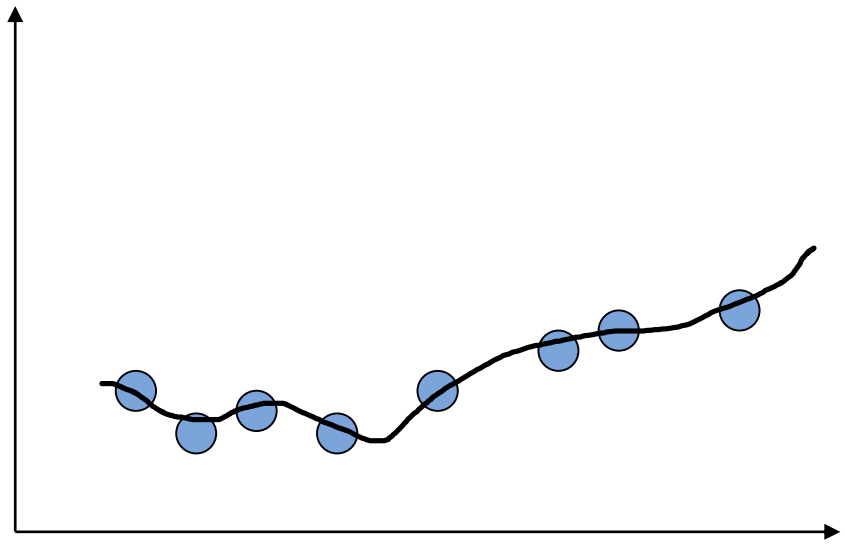
Supervised Learning - Regression

- **An input-output training set is given**
  - Day: Monday, Hour: 10am, Month: February, Temperature: 4ºC ➔ Electricity demand = 1450
  - Day: Monday, Hour: 10am, Month: February, Temperature: 5ºC ➔ Electricity demand = 1410
  - Day: Monday, Hour: 10am, Month: February, Temperature: 10ºC ➔ Electricity demand = 1380

- **Find a function that estimates the output for a new entry**
  - Day: Monday, Hour: 10am, Month: February, Temperature: 7ºC ➔ Electricity demand = ?

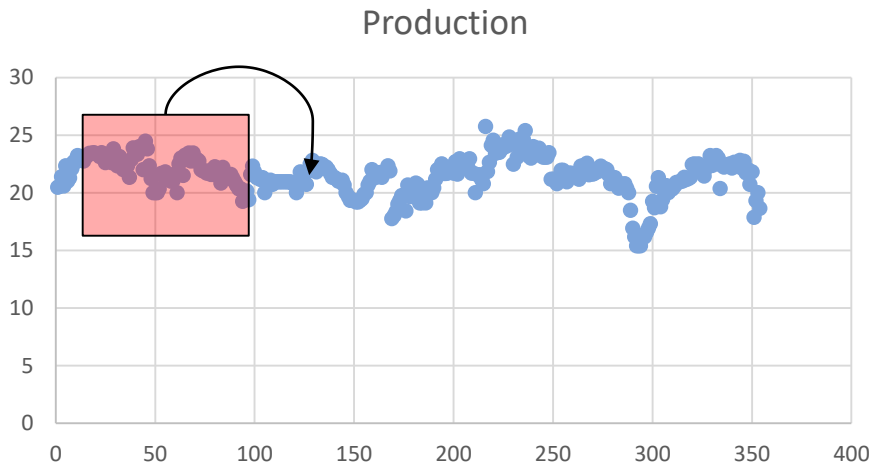
Supervised Learning - Regression

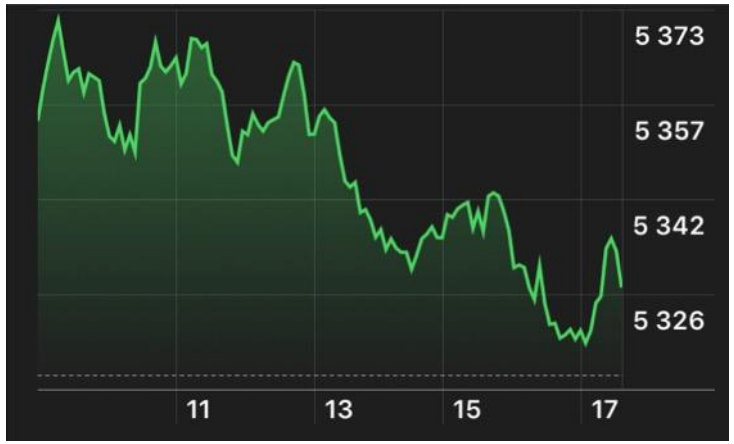
- Forecasting, pricing models, performance models, weather …



Supervised Learning - Time Series Analysis

- Economic forecasting, stock market predictions…





Unsupervised Learning – Clustering

- **A set of examples is given**
  - Human1 (Height = 180, Mass = 80)
  - Human2 (Height = 160, Mass = 53)
  - Human3 (Height = 190, Mass = 70)
  - Human4 (Height = 167, Mass = 56)

- **Group the examples into "natural" clusters**
  - Cluster1: Human1 & Human3
  - Cluster2: Human2 & Human4

Unsupervised Learning – Clustering

Unsupervised Learning – Knowledge Representation

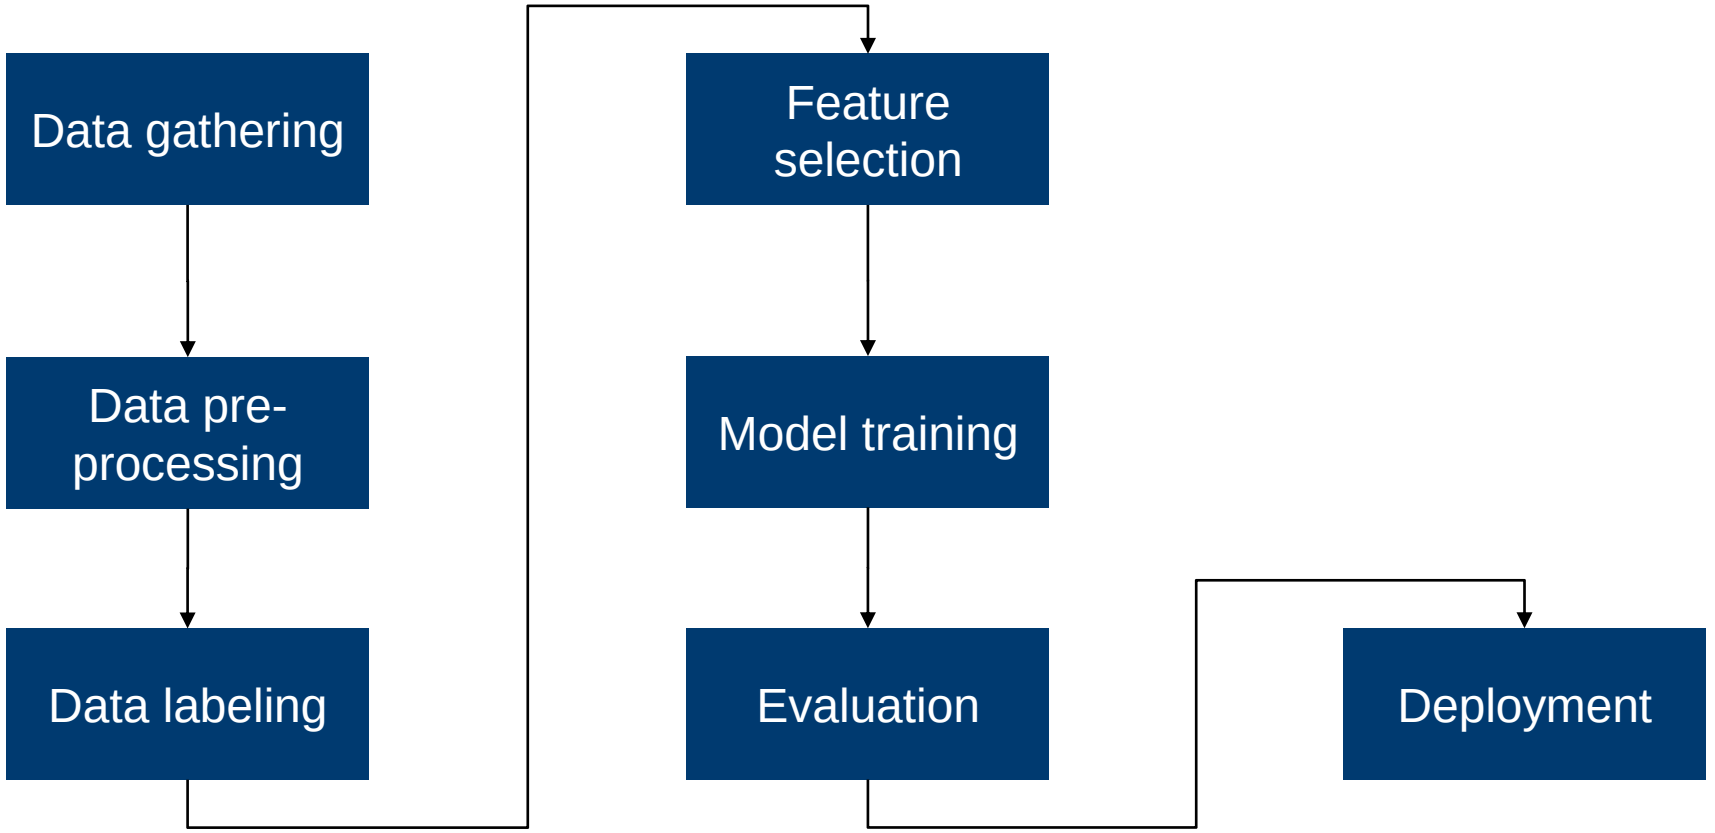
- Decision trees, ontologies, question-answering, diagnosis…

Reinforcement Learning

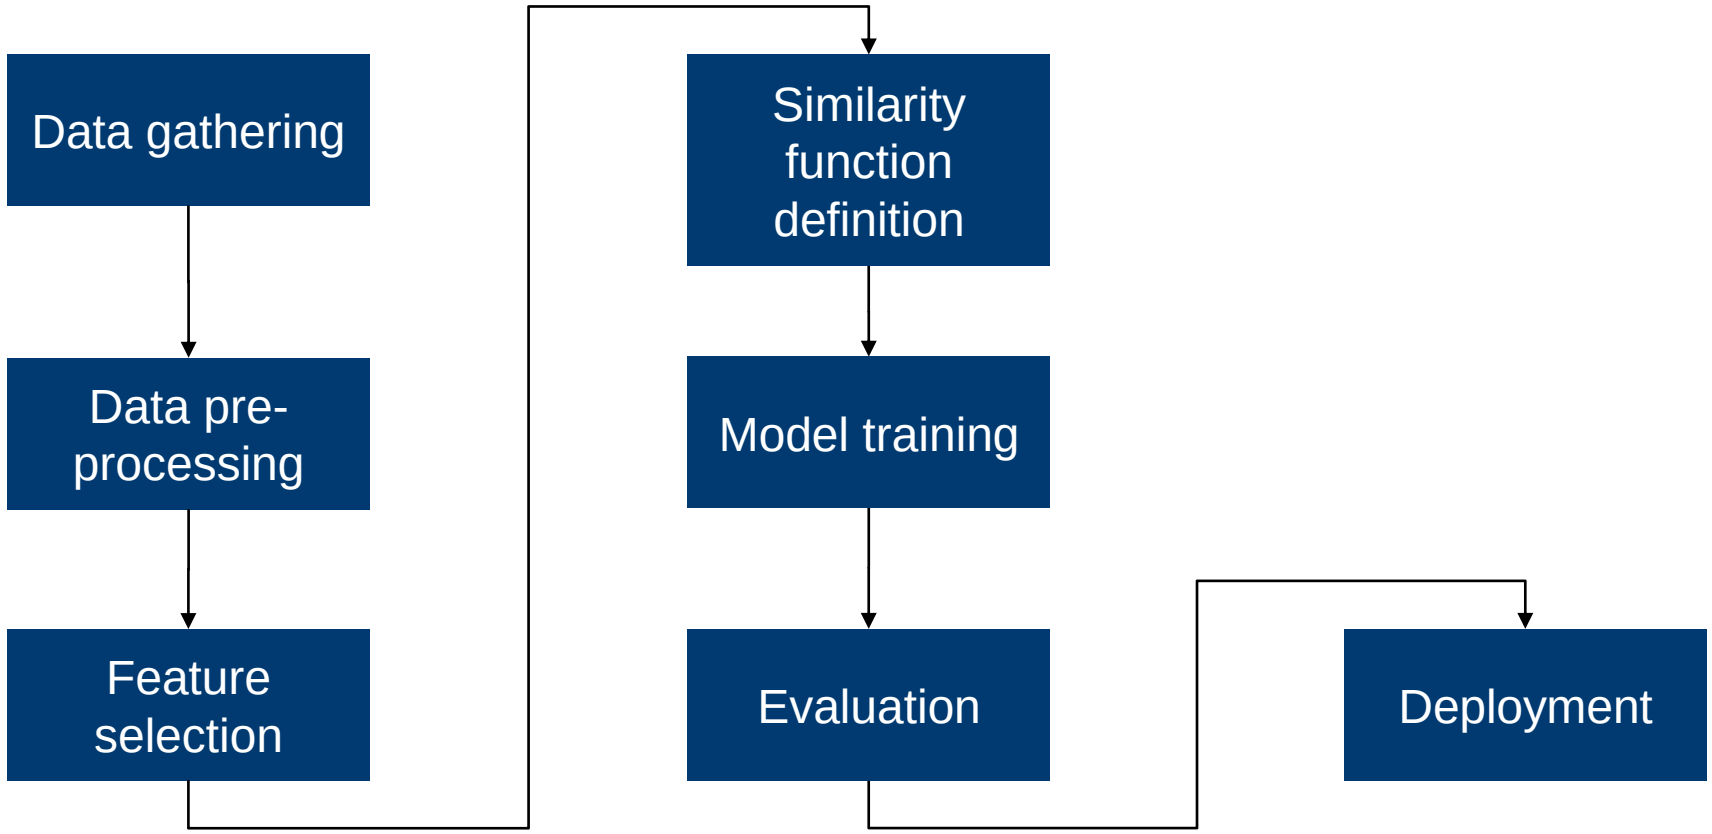
- An agent interacts with the world
  - Observes
  - Performs actions
- At every action done the agent is punished or encouraged
- The agent must make sure to have the maximum of encouragement

Building an Artificial Intelligence System

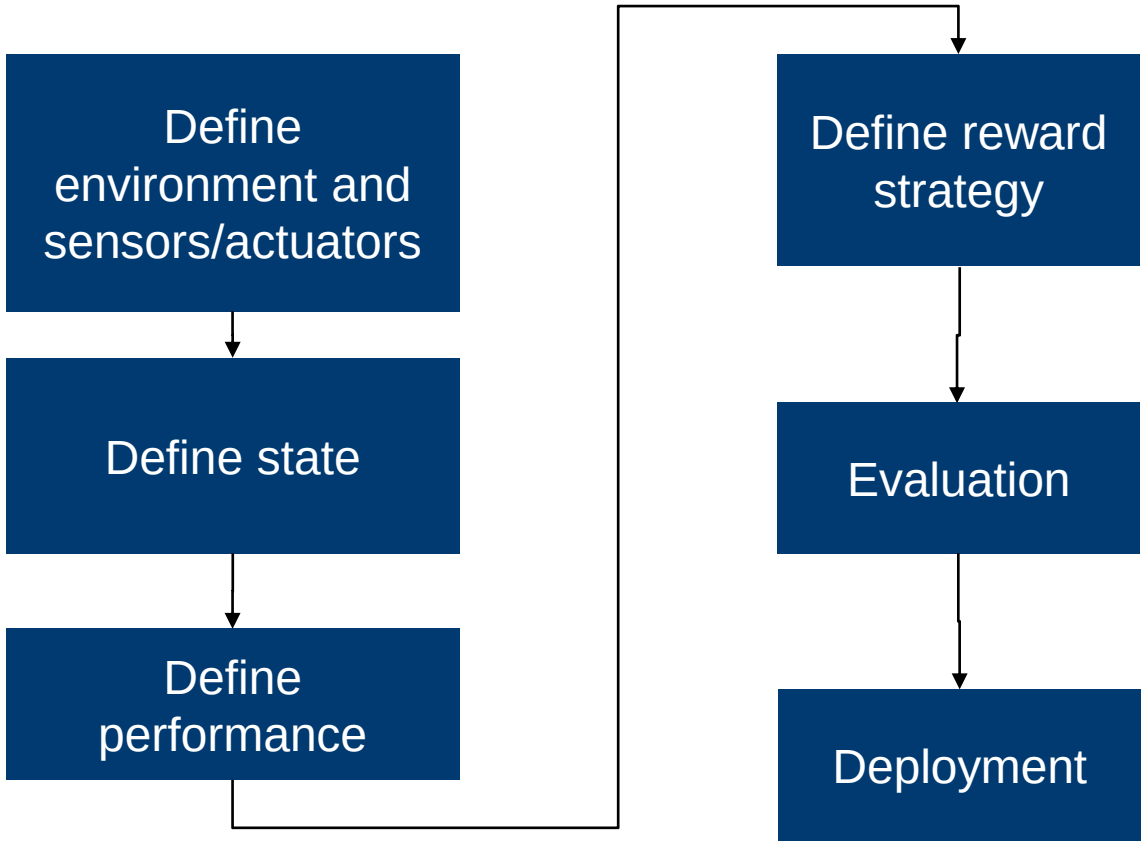
Building a Supervised System



Building an Unsupervised System



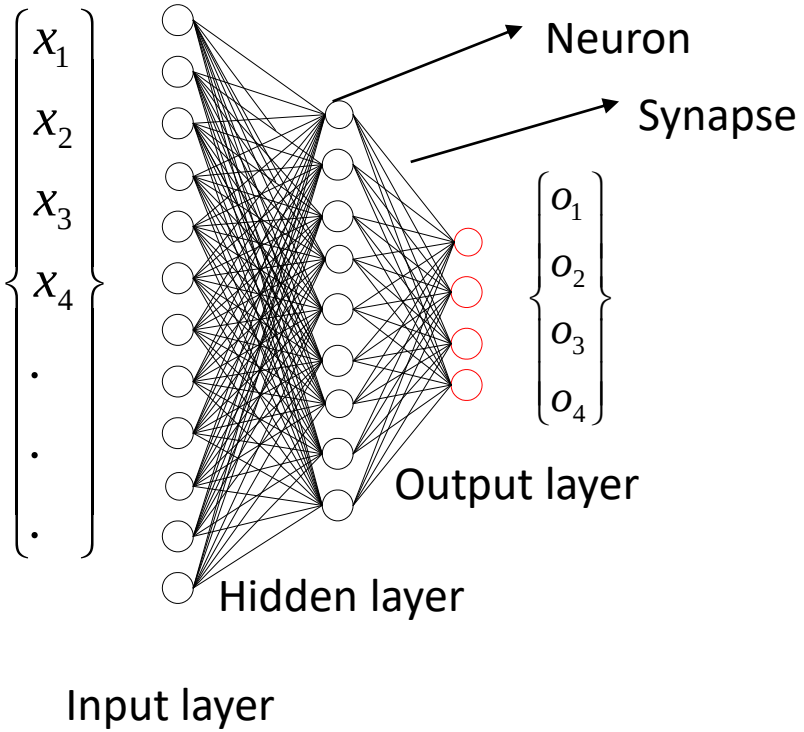
Building a Reinforcement System



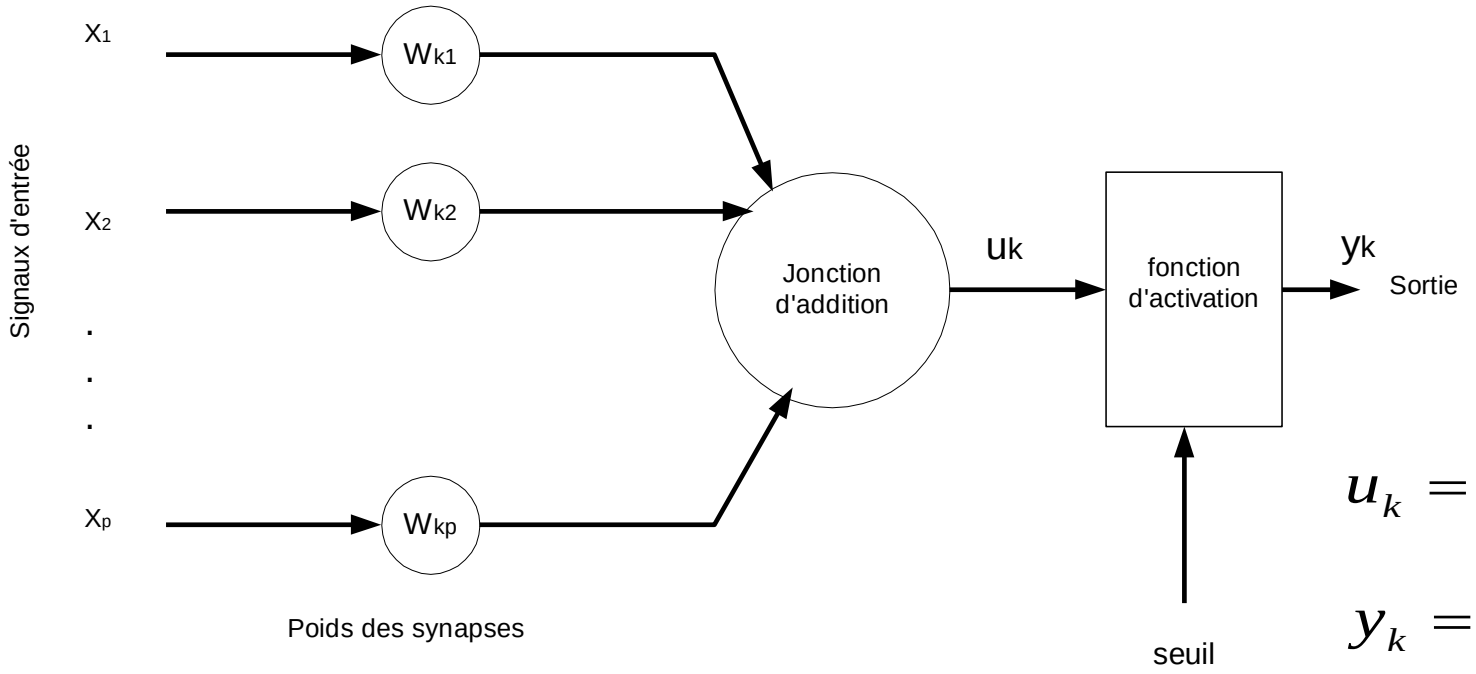
Commonly Used Techniques

- Artificial Neural Networks (ANN)
- K-Nearest Neighbours (KNN)
- Support Vector Machines
- Gaussian Mixture Models
- Hidden Markov Models
- Expectation-Maximisation
- K-Means clustering
- Genetic Algorithms

Commonly Used Techniques - ANN



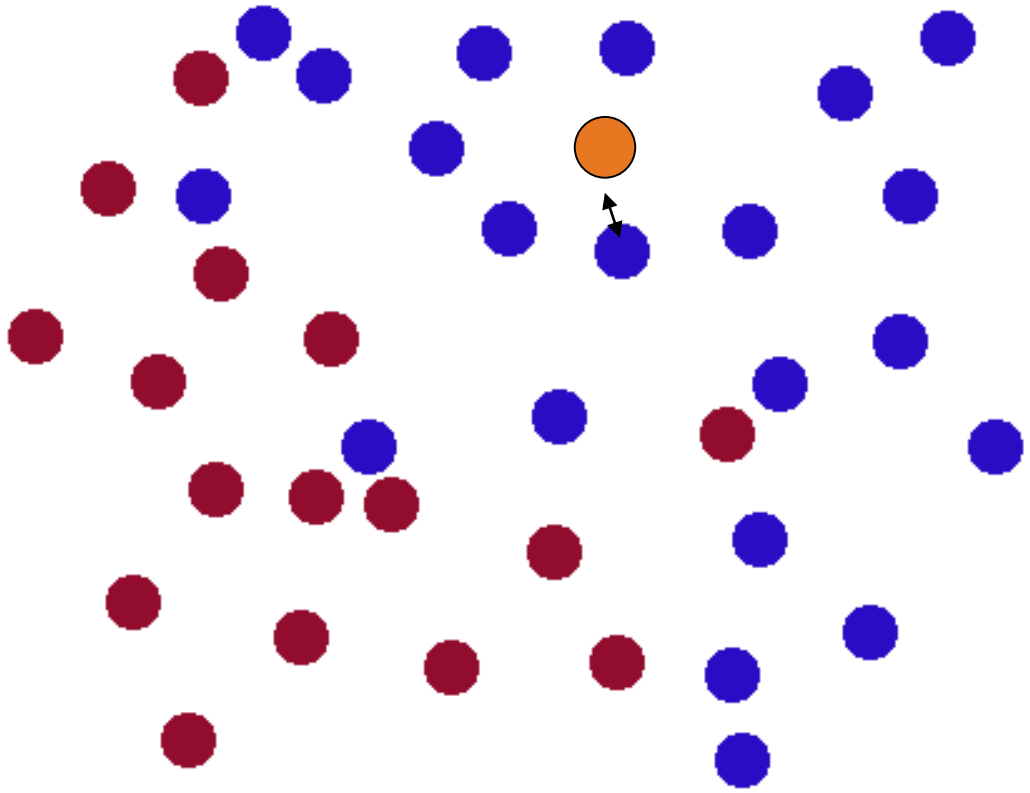
Commonly Used Techniques - ANN



$$u_k = \sum_{j=1}^{p} w_{kj} x_j$$

$$y_k = \varphi(u_k - \theta_k)$$

Commonly Used Techniques - ANN



Tools

- **Python: scikit-learn, TensorFlow..**
- **WEKA**
- **MATLAB**
- **Cloud-based**
  - IBM Watson
  - Google Machine Learning
  - Microsoft Azure
  - Amazon Machine Learning

Python – TensorFlow

- Tensorflow is an open source library for Machine Learning
- Complex models could be built using Tensorflow
- https://www.tensorflow.org/

Python – TensorFlow

```
import tensorflow as tf
from tensorflow import keras

import numpy as np
import matplotlib.pyplot as plt

fashion_mnist = keras.datasets.fashion_mnist

(train_images, train_labels), (test_images, test_labels) = fashion_mnist.load_data()
class_names = ['T-shirt/top', 'Trouser', 'Pullover', 'Dress', 'Coat',
               'Sandal', 'Shirt', 'Sneaker', 'Bag', 'Ankle boot']
train_images = train_images / 255.0
test_images = test_images / 255.0

plt.figure(figsize=(10,10))
for i in range(25):
    plt.subplot(5,5,i+1)
    plt.xticks([])
    plt.yticks([])
    plt.grid(False)
    plt.imshow(train_images[i], cmap=plt.cm.binary)
    plt.xlabel(class_names[train_labels[i]])
plt.show()
```

Python – TensorFlow

Python – TensorFlow

```
import tensorflow as tf

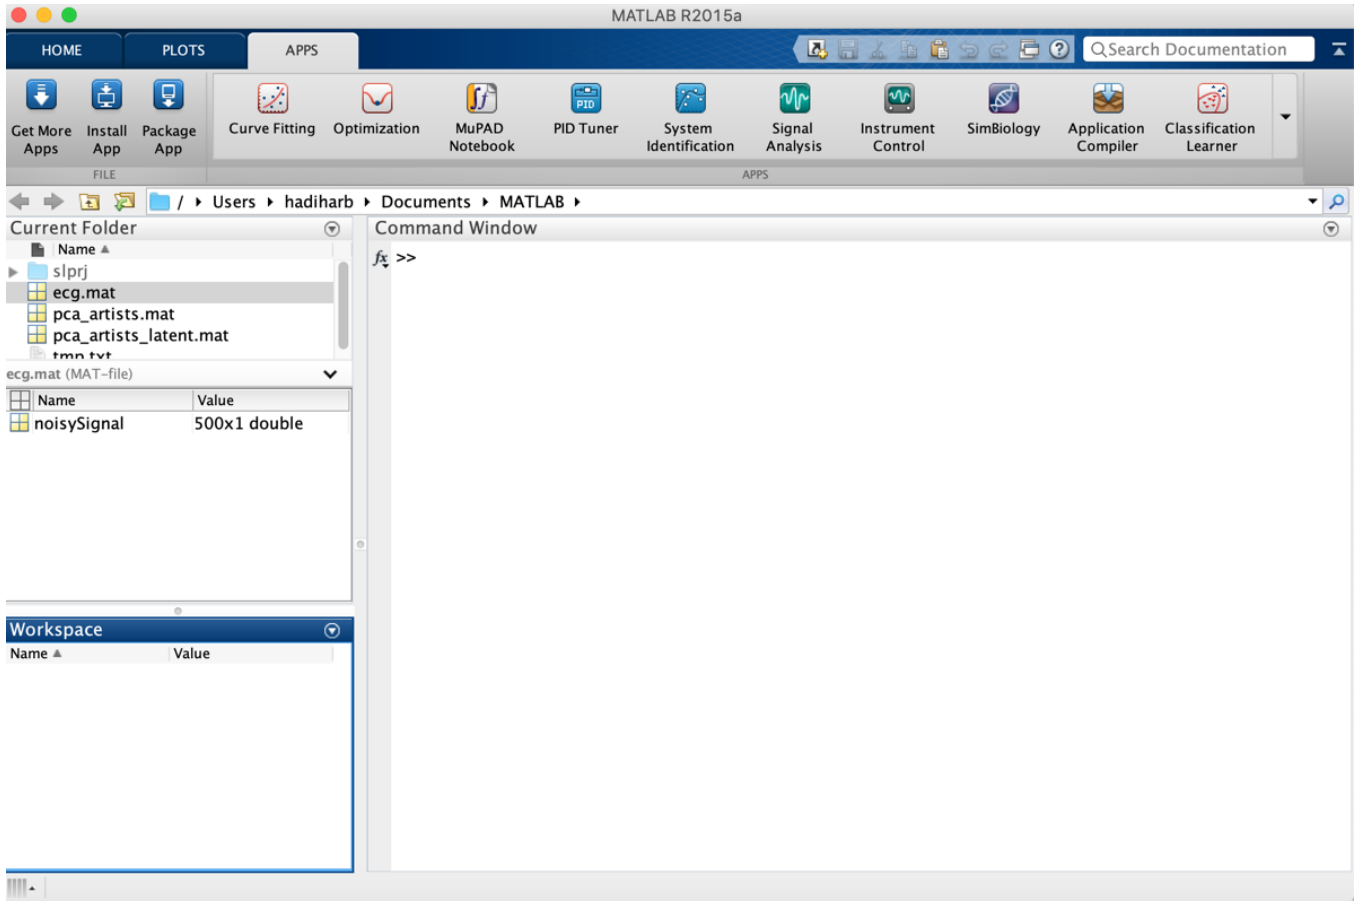
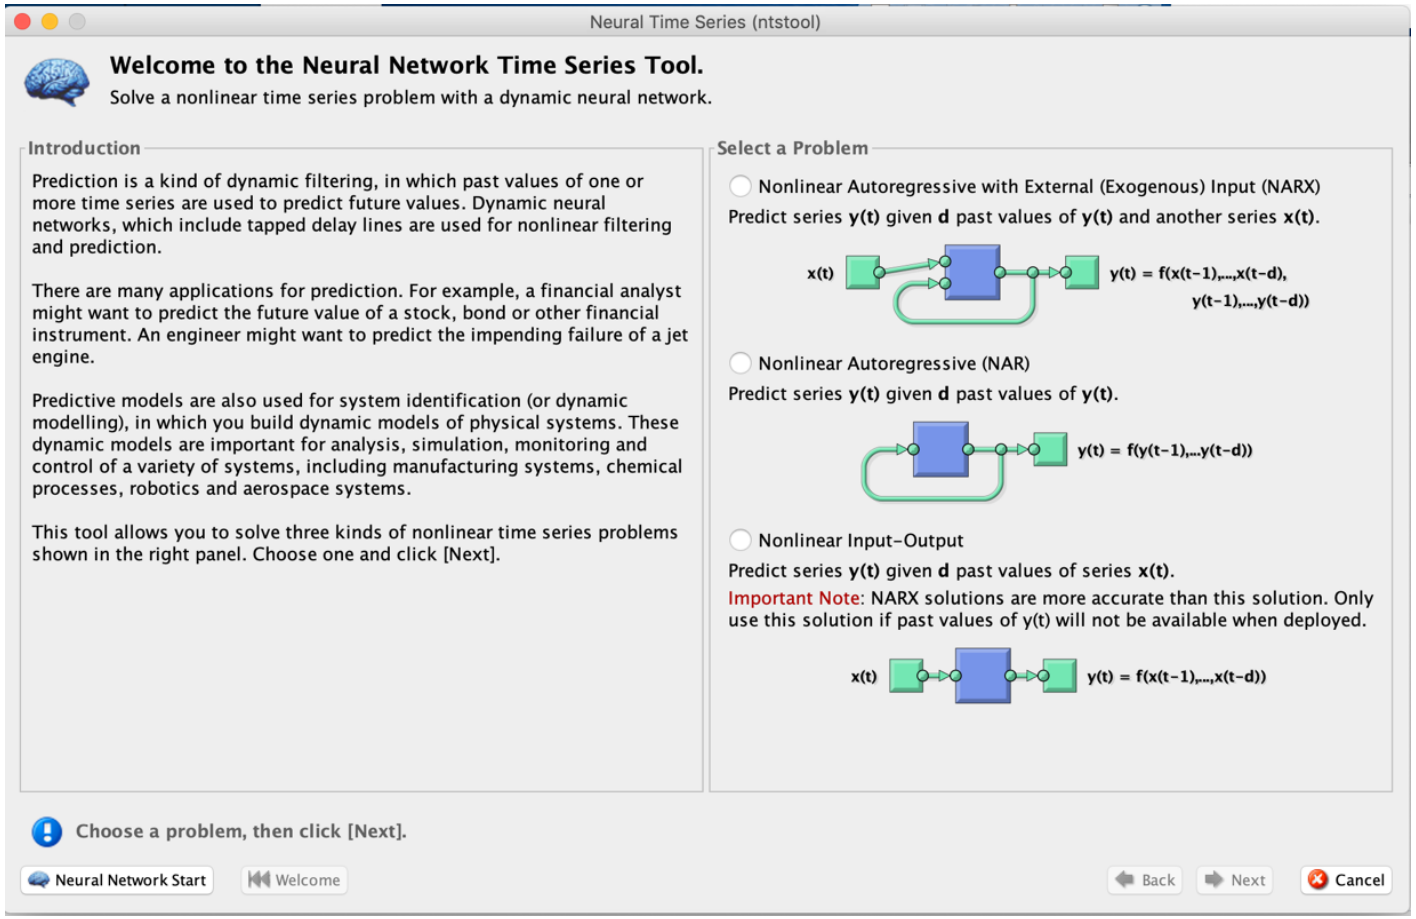
MATLAB

- A commonly used software by engineers and scientist





Neural Time Series (ntstool)
Welcome to the Neural Network Time Series Tool.
Solve a nonlinear time series problem with a dynamic neural network.
Introduction
Prediction is a kind of dynamic filtering, in which past values of one or more time series are used to predict future values. Dynamic neural networks, which include tapped delay lines are used for nonlinear filtering and prediction.
There are many applications for prediction. For example, a financial analyst might want to predict the future value of a stock, bond or other financial instrument. An engineer might want to predict the impending failure of a jet engine.
Predictive models are also used for system identification (or dynamic modelling), in which you build dynamic models of physical systems. These dynamic models are important for analysis, simulation, monitoring and control of a variety of systems, including manufacturing systems, chemical processes, robotics and aerospace systems.
This tool allows you to solve three kinds of nonlinear time series problems shown in the right panel. Choose one and click [Next].
Select a Problem
Nonlinear Autoregressive with External (Exogenous) Input (NARX)
Predict series y(t) given d past values of y(t) and another series x(t).
x(t)
y(t) = f(x(t-1),...,x(t-d), y(t-1),...,y(t-d))
Nonlinear Autoregressive (NAR)
Predict series y(t) given d past values of y(t).
y(t) = f(y(t-1),...y(t-d))
Nonlinear Input-Output
Predict series y(t) given d past values of series x(t).
Important Note: NARX solutions are more accurate than this solution. Only use this solution if past values of y(t) will not be available when deployed.
x(t)
y(t) = f(x(t-1),...,x(t-d))
Choose a problem, then click [Next].

Examples of Applications in the Industry

Chatbot using Recurrent Neural Networks

Q: HI
HI THERE

Q: WHERE WERE YOU LAST NIGHT?
I WAS IN THE BATHROOM .

Q: WHAT'S YOUR NAME?
MY NAME?

Q: YES YOUR NAME PLEASE
MY NAME IS JOHN

Q: HOW ARE YOU TODAY?
FINE, I'M DOING GREAT.

Q: DO YOU LIKE TO GO OUT WITH ME?
SURE.

Q: I LIKE YOU
I LIKE YOU.

Q: I LOVE YOU. YOU KNOW THAT?
I LOVE YOU.

Q: LET'S GO GRAB A BEER
COME ON!

Q: I GOTTA GO NOW
BYE

Examples of Applications in the Industry

We are still quite far from general AI, however, specialised AI can be used if:

- You have data
- You need to make predictions
- You need to optimise operations/control

Upcoming Technical Webinars

Introduction to Hazardous Areas and HA Classification

Date and time: Thursday, 5 May 2022, 3:00pm - 4:00pm AWST

Upcoming webinars: https://www.eit.edu.au/news-events/events/

Upcoming EIT Courses

We have a range of courses in Civil, Electrical, Mechanical and Industrial Automation Engineering.

Course Type	Intakes/start date
Professional Certificate of Competency courses (short courses)	Throughout the year
Diploma & Advanced Diploma courses	Throughout the year
Undergraduate Certificates	25 July 2022
Bachelor of Science degrees	25 July 2022
Graduate Certificates	27 June 2022
Master of Engineering degrees	27 June 2022
Doctor of Engineering	25 July 2022
On Campus Bachelor's, Master's and Doctor of Engineering programs	1 August 2022

See our full course schedule here: www.eit.edu.au/schedule/

Certificate of Attendance

To receive your digital certificate of attendance for participating in this webinar, please fill out the form and survey here (or scan the QR Code): qrco.de/bcxTLB

Please note that Certificate of Attendances will be sent out in the next 1-2 business days.
